

Data Engineer

Career Objective

Computer Science graduate from the University of Nottingham and a full-time Data Engineer with hands-on experience building end-to-end cloud data pipelines for analytics, compliance, and reporting. Proficient in Python and SQL, with practical expertise in ETL/ELT pipeline development, API data ingestion, and cloud data platforms such as Google BigQuery.

Experienced in transforming large-scale raw data into structured, analytics-ready datasets. Strong foundation in data analysis and machine learning, with a passion for leveraging data and AI to drive actionable, data-driven decisions.

Education

Talentlabs, Kuala Lumpur

Sep 2024 – Dec 2024

Certified Associate in Data Analytics

- Built a strong foundation in Python and SQL, applying these skillsets in real-world data manipulation and analysis.
- Applied statistical methods to extract patterns from datasets and paired up with tools like Tableau, building insightful and impactful dashboards for data visualization.

University of Nottingham, UK

Sep 2020 – July 2023

BSc (Hons) Computer Science with Artificial Intelligence

- Graduated with an upper second-class honours classification. (2:1)
- Relevant modules: Machine Learning, Artificial Intelligence Methods, Algorithms Correctness & Efficiency, Database and Interfaces, and Operating Systems & Concurrency.
- Accredited by the British Computer Society. (BCS)

Relevant Experience

Databricks Tech Sdn. Bhd.

Mar 2025 – Current

Data Engineer

- Designed and maintained end-to-end cloud data pipelines using Pentaho, PostgreSQL (staging), and Google BigQuery, processing gaming transaction and user activity data for analytics and reporting.
- Built API ingestion pipelines to extract data from external vendors, transform payloads, and load into BigQuery for business and compliance use cases.
- Developed and deployed automated anomaly and fraud flagging scripts on Google Dataproc to detect suspicious gaming behavior and high-risk activity.
- Implemented risk analytics pipelines that store suspicious player activity in BigQuery, allowing compliance teams to review, investigate, and take action.

PwC Malaysia

Oct 2024 – Jan 2025

Risk Assurance – Digital Audit

- Assisted banking clients in identifying and mitigating risks associated with their data systems, improving data integrity and compliance with regulatory standards.
- Increased financial reporting efficiency by 20% by collaborating closely with the Finance Assurance team to streamline processes.
- Conducted 4 IT General Controls (ITGC) tests, ensuring compliance with industry standards and verifying data accuracy in financial reports.
- Utilized SQL to extract and validate 10000+ rows of financial data, and ensuring data reliability.

Technical skills and Projects

Programming: Python, Java, C, SQL, MATLAB, Git, HTML, CSS, Jupyter Notebook, Tableau

House Price Regression Problem

- Constructed a predictive model for house prices using a dataset with 2,919 rows and 81 features, incorporating residential and architectural data.
- Identified that the SalePrice variable was rightly-skewed, and hence applied log transformation to normalize the distribution.
- Evaluated multiple machine learning models, including ElasticNet, Lasso, Random Forest, and XGBoost, achieving the best result with ElasticNet, which produced a low RMSE score of 0.11657.
